Discontinuous Galerkin Methods For Solving Elliptic And parabolic Equations: Theory and Implementation (Frontiers in Applied Mathematics)

By Béatrice M. Rivière

Discontinuous Galerkin (DG) methods for solving partial differential equations, developed in the late 1990s, have become popular among computational scientists. This book covers both theory and computation as it focuses on three primal DG methods--the symmetric interior penalty Galerkin, incomplete interior penalty Galerkin, and nonsymmetric interior penalty Galerkin which are variations of interior penalty methods. The author provides the basic tools for analysis and discusses coding issues, including data structure, construction of local matrices, and assembling of the global matrix. Computational examples and applications to important engineering problems are also included.

Discontinuous Galerkin Methods for Solving Elliptic and Parabolic Equations: Theory and Implementation is divided into three parts: Part I focuses on the application of DG methods to second order elliptic problems in one dimension and in higher dimensions. Part II presents the time-dependent parabolic problems without and with convection. Part III contains applications of DG methods to solid mechanics (linear elasticity), fluid dynamics (Stokes and Navier Stokes), and porous media flow (two-phase and miscible displacement).

Appendices contain proofs and MATLAB® code for one-dimensional problems for elliptic equations and routines written in C that correspond to algorithms for the implementation of DG methods in two or three dimensions.

Audience: This book is intended for numerical analysts, computational and applied mathematicians interested in numerical methods for partial differential equations or who study the applications discussed in the book, and engineers who work in fluid dynamics and solid mechanics and want to use DG methods for their numerical results. The book is appropriate for graduate courses in finite

element methods, numerical methods for partial differential equations, numerical analysis, and scientific computing. Chapter 1 is suitable for a senior undergraduate class in scientific computing.

Contents: List of Figures; List of Tables; List of Algorithms; Preface; Part I: Elliptic Problems; Chapter 1: One-dimensional problem; Chapter 2: Higher dimensional problem; Part II: Parabolic Problems; Chapter 3: Purely parabolic problems; Chapter 4: Parabolic problems with convection; Part III: Applications; Chapter 5: Linear elasticity; Chapter 6: Stokes flow; Chapter 7: Navier-Stokes flow; Chapter 8: Flow in porous media; Appendix A: Quadrature rules; Appendix B: DG codes; Appendix C: An approximation result; Bibliography; Index.

Editorial Review

About the Author

Béatrice Rivière is an Associate Professor in the Department of Computational and Applied Mathematics at Rice University. Her research interests include the development of high-order numerical methods for solving partial differential equations arising from complex flow and transport problems as well as the modeling of inflammation and wound healing in biomedical applications.

Users Review

From reader reviews:

Carlos Wesley:

As people who live in the modest era should be change about what going on or information even knowledge to make these keep up with the era that is certainly always change and advance. Some of you maybe will certainly update themselves by studying books. It is a good choice to suit your needs but the problems coming to you is you don't know what type you should start with. This Discontinuous Galerkin Methods For Solving Elliptic And parabolic Equations: Theory and Implementation (Frontiers in Applied Mathematics) is our recommendation to help you keep up with the world. Why, since this book serves what you want and need in this era.

Charles Davis:

Nowadays reading books be a little more than want or need but also get a life style. This reading habit give you lot of advantages. Advantages you got of course the knowledge the actual information inside the book that improve your knowledge and information. The details you get based on what kind of book you read, if you want get more knowledge just go with schooling books but if you want sense happy read one with theme for entertaining including comic or novel. The actual Discontinuous Galerkin Methods For Solving Elliptic And parabolic Equations: Theory and Implementation (Frontiers in Applied Mathematics) is kind of e-book which is giving the reader unpredictable experience.

Julie Nealy:

Do you like reading a publication? Confuse to looking for your selected book? Or your book had been rare? Why so many concern for the book? But virtually any people feel that they enjoy to get reading. Some people likes reading through, not only science book but additionally novel and Discontinuous Galerkin Methods For Solving Elliptic And parabolic Equations: Theory and Implementation (Frontiers in Applied Mathematics) as well as others sources were given expertise for you. After you know how the great a book, you feel need to read more and more. Science e-book was created for teacher or students especially. Those guides are helping them to add their knowledge. In additional case, beside science guide, any other book likes Discontinuous Galerkin Methods For Solving Elliptic And parabolic Equations: Theory and Implementation (Frontiers in Applied Mathematics) to make your spare time considerably more colorful.

Many types of book like this.

James Fitzpatrick:

As a student exactly feel bored for you to reading. If their teacher inquired them to go to the library or make summary for some book, they are complained. Just minor students that has reading's heart or real their hobby. They just do what the educator want, like asked to go to the library. They go to at this time there but nothing reading seriously. Any students feel that studying is not important, boring as well as can't see colorful photos on there. Yeah, it is to be complicated. Book is very important for yourself. As we know that on this age, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore this Discontinuous Galerkin Methods For Solving Elliptic And parabolic Equations: Theory and Implementation (Frontiers in Applied Mathematics) can make you sense more interested to read.
