**Near-Earth Laser Communications (Optical Science and Engineering)** From CRC Press

Invented more than a hundred years ago by Alexander Graham Bell, the technology of free-space optical communications, or lasercom, has finally reached the level of maturity required to meet a growing demand for operational multi-giga-bit-per-second data rate systems communicating to and from aircrafts and satellites. Putting the emphasis on near-earth links, including air, LEO, MEO, and GEO orbits, **Near-Earth Laser Communications** presents a summary of important free-space laser communication subsystem challenges and discusses potential ways to overcome them.

This comprehensive reference provides up-to-date information on component and subsystem technologies, fundamental limitations, and approaches to reach those limits. It covers basic concepts and state-of-the-art technologies, emphasizing device technology, implementation techniques, and system trades. The authors discuss hardware technologies and their applications, and also explore ongoing research activities and those planned for the near future.

The analytical aspects of laser communication have been covered to a great extent in several books. However, a detailed approach to system design and development, including trades on subsystem choices and implications of the hardware selection for satellite and aircraft telecommunications, is missing. Highlighting key design variations and critical differences between them, this book distills decades' worth of experience into a practical resource on hardware technologies.

### **Editorial Review**

About the Author

Jet Propulsion Laboratory, Pasadena, California, USA

### **Users Review**

#### **From reader reviews:**

##### **Avis Zeiger:**

What do you concentrate on book? It is just for students as they are still students or the item for all people in the world, exactly what the best subject for that? Simply you can be answered for that concern above. Every person has several personality and hobby for each other. Don't to be compelled someone or something that they don't want do that. You must know how great in addition to important the book Near-Earth Laser Communications (Optical Science and Engineering). All type of book are you able to see on many options. You can look for the internet resources or other social media.

##### **William Grant:**

Now a day people who Living in the era everywhere everything reachable by match the internet and the resources included can be true or not require people to be aware of each data they get. How individuals to be smart in receiving any information nowadays? Of course the solution is reading a book. Reading through a book can help folks out of this uncertainty Information mainly this Near-Earth Laser Communications (Optical Science and Engineering) book as this book offers you rich info and knowledge. Of course the information in this book hundred % guarantees there is no doubt in it as you know.

##### **Timothy Rhine:**

Reading a book to become new life style in this yr; every people loves to examine a book. When you go through a book you can get a lot of benefit. When you read ebooks, you can improve your knowledge, since book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you wish to get information about your analysis, you can read education books, but if you want to entertain yourself look for a fiction books, this sort of us novel, comics, as well as soon. The Near-Earth Laser Communications (Optical Science and Engineering) will give you a new experience in examining a book.

##### **Emily Scott:**

Don't be worry when you are afraid that this book will probably filled the space in your house, you will get it in e-book method, more simple and reachable. This kind of Near-Earth Laser Communications (Optical

Science and Engineering) can give you a lot of friends because by you considering this one book you have factor that they don't and make anyone more like an interesting person. That book can be one of one step for you to get success. This e-book offer you information that perhaps your friend doesn't recognize, by knowing more than other make you to be great individuals. So , why hesitate? We need to have Near-Earth Laser Communications (Optical Science and Engineering).
