Marine Biofouling: Colonization Processes and Defenses By Alexander I. Railkin

Recent instances of bioinvasion, such as the emergence of the zebra mussel in the American Great Lakes, generated a demand among marine biologists and ecologists for groundbreaking new references that detail how organisms colonize hard substrates, and how to prevent damaging biomass concentrations.

Marine Biofouling: Colonization Processes and Defenses is the English language version of a comprehensive work by eminent Russian scientist Alexander I. Railkin, who details the causes of vast biomass concentrations on submerged hard substrates. He also delivers a quantitative description of colonization processes and provides detailed models for preventing biofouling.

This volume expounds on many topics rarely discussed in the frame of one book: types of hard substrate communities; comparison of hard and soft substrate communities; harm caused by micro- and macrofoulers; larval taxes and drift; mechanisms of settlement and attachment of microorganisms, invertebrates, ascidians and macroalgae; the impact of currents; protection from epibionts; industrial biofouling protection; successions on hard substrates; and the recovery of disturbed communities or the self-assembly of communities. The text includes much Russian-language research translated for the first time.

Through a thorough examination of substrate organisms and an exploration of preventive methods, this monograph prepares those concerned with marine biology to help protect the self-purifying organisms that keep marine ecosystems healthy and productive.

Editorial Review

Review

"The organization of this book breaks down this complex problem into its fundamental biological and ecological components. This is an important reference resource for specialists of all kinds." - Southeastern Naturalist, Vol. 3, No. 3, 2004

Users Review

From reader reviews:

Eloisa Hurd:

What do you concentrate on book? It is just for students because they're still students or the item for all people in the world, the actual best subject for that? Just simply you can be answered for that issue above. Every person has distinct personality and hobby for each other. Don't to be forced someone or something that they don't want do that. You must know how great along with important the book Marine Biofouling: Colonization Processes and Defenses. All type of book is it possible to see on many sources. You can look for the internet solutions or other social media.

Anne Braden:

Hey guys, do you would like to finds a new book to see? May be the book with the concept Marine Biofouling: Colonization Processes and Defenses suitable to you? Often the book was written by popular writer in this era. Typically the book untitled Marine Biofouling: Colonization Processes and Defenses is the main of several books in which everyone read now. This particular book was inspired many people in the world. When you read this e-book you will enter the new shape that you ever know before. The author explained their strategy in the simple way, consequently all of people can easily to comprehend the core of this e-book. This book will give you a wide range of information about this world now. To help you see the represented of the world with this book.

Cindy Coleman:

You are able to spend your free time to see this book this publication. This Marine Biofouling: Colonization Processes and Defenses is simple bringing you can read it in the area, in the beach, train and soon. If you did not get much space to bring the actual printed book, you can buy the actual e-book. It is make you much easier to read it. You can save the book in your smart phone. So there are a lot of benefits that you will get when one buys this book.

Thomas Mitchell:

As a student exactly feel bored for you to reading. If their teacher requested them to go to the library or to make summary for some e-book, they are complained. Just small students that has reading's heart or real their passion. They just do what the educator want, like asked to the library. They go to there but nothing reading very seriously. Any students feel that looking at is not important, boring in addition to can't see colorful pictures on there. Yeah, it is to get complicated. Book is very important for you personally. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. So , this Marine Biofouling: Colonization Processes and Defenses can make you truly feel more interested to read.
